Courseware | Grades 6–12

imagine edgenuity

Imagine Edgenuity® Integration Implementations

At Imagine Learning, we want to make educators' lives easier. That's why we ensure that our tools can easily integrate into the systems and processes that already exist in your districts and schools. Our team will work with you to make the integration process seamless — so educators can focus on supporting students and students can focus on their learning.

Available Integrations for Imagine Edgenuity

Student Information System (SIS) integrations provide a method for creating user accounts and (optionally) enrolling students in courses based on the data that already exists in your SIS.

- Nightly imports from a variety of SISs in addition to Clever and Classlink.
- Native API with Genius, Maestro, and School Pathways

Single Sign-On (SSO) integrations let you manage account creation and/or authentication from a single portal. All SSO integrations must be used in combination with a nightly import to create user accounts and (optionally) enroll students in courses.

- ClassLink
- Clever
- Active Directory/ADFS
- LDAP
- SAML
- Google

Learning Management System (LMS) integrations allow for single sign-on via LTI or content integration via Thin Common Cartridge (TCC).

- Canvas
- Schoology
- Buzz
- Safari Montage
- Moodle
- Most LTI 1.1 or 1.2 certified LMSs

*TCC LTI 1.3 has only been tested to work with Canvas and Schoology to date.

We take care of the support so you can focus on the instruction

Imagine Learning is committed to providing customized support for your integration needs. While we focus on ensuring you get the technical support needed for your district or school, you can have more freedom to focus on the instructional needs of your students.

TIER 4 DP PROJECT UNICORN

Imagine Edgenuity is a member of 1EdTech and has earned the highest level of interoperability certification from Innovate EDU's Project Unicorn.

Integration Functionality

SIS Integrations to Automate User Management

Automating data syncing ensures that implementation can occur without disruption. The secure SIS integration process is how we sync integral information like user information and class rosters.

Use SIS integration to automate:

- **Creating New Users:** Add user information (name, password, grade level, email, etc.)
- **Managing Existing Users:** Keep information current (data updates, school access, etc.)
- **Deactivating Existing Users:** Automatically deactivate users who leave the district and reactivate users who return
- **Rostering:** Roster students in courses/classes based on SIS schedules
- **Grade Passback:** Manage and publish grades for Imagine EdgeEX activities in your LMS with TCC version 1.3 compatibility

Interoperability to Manage Courses and Content

LTI and Thin Common Cartridge (TCC) allow Imagine Edgenuity content to be delivered via your learning management system. SSO integration allows you to enroll students from your LMS but have them complete coursework in the Edgenuity LMS. Content integration via TCC embeds an entire Imagine Edgenuity course structure directly into your LMS.

What is the impact of content integrations?

- Students can access courses from multiple providers in one place.
- Educators can easily integrate Imagine Learning content with district-authored content or content from other educational tools.

Supported Courses

	SSO Available	TCC Available
Core subject areas (math, ELA, science, social studies)	✓	✓
General electives	✓	✓
Advanced Placement®	✓	✓
Booster courses	✓	✓
Imagine Purpose	✓	✓
World languages	✓	
eDynamic	✓	
Career and technical education (CTE)	✓	
Virtual Tutors (test prep)	✓	
EdgeEX	✓	✓ *

Advanced Placement is a registered trademark of the College Board

*Requires an LTI 1.3 integration
