Core Curriculum | Grades PreK–12

More Than a Curriculum

Where Insight and Teaching Connect

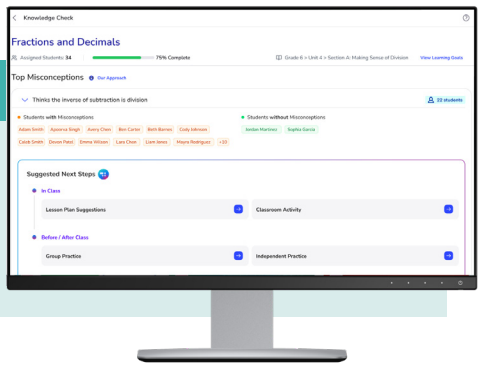

Great math instruction starts with understanding how students think, but acting on that insight in real time can be challenging. Imagine IM brings curriculum, assessment, and AI together so teachers can see student thinking and respond instantly.

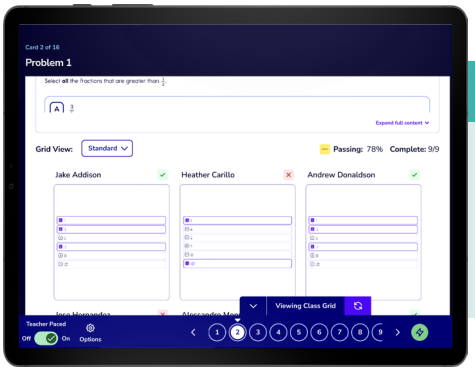

Capture Student Thinking

Imagine IM provides visibility into student thinking before, during, and throughout instruction so teachers can respond with clarity and confidence.

See Misconceptions Before You Teach

Knowledge Checks surface student thinking and suggest groupings and supports, helping teachers stay on track and make the most of instructional time.

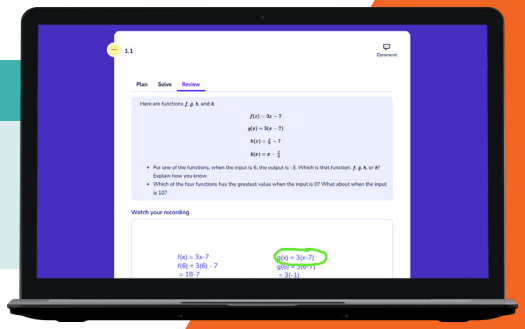

Watch Learning Unfold in Your Classroom

LiveLearn with the Student Response Grid gives a class-wide view of student thinking so teachers can adjust instruction on the spot.

See the Strategy, Not Just the Answer

CueThink helps students show their reasoning, giving teachers clear insight into how they think.

Turn Insights into Action

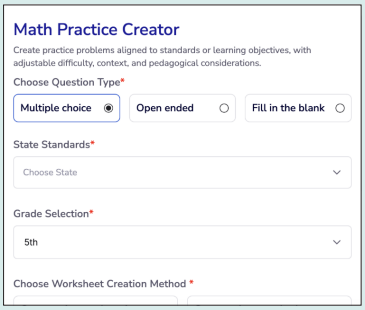

Support for Teachers

ClassMate uses AI to turn student insight into immediate instructional next steps without added workload.

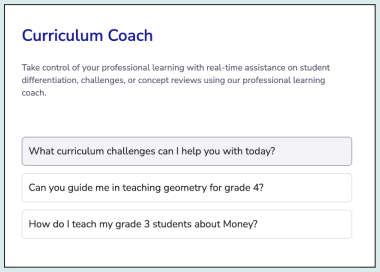

Math Practice Creator

Creates targeted, IM-aligned practice based on student needs.

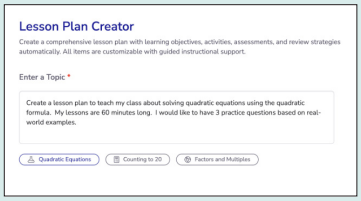

Curriculum Coach

Provides just-in-time instructional guidance grounded in IM pedagogy.

Lesson Plan Creator

Generates standards-aligned lessons with built-in supports and differentiation.

Support for Students

ClassMate gives the right help at the right time, tailored to what each one actually needs.

Student AI Tutor

Delivers personalized support tied directly to student misconceptions and upcoming learning.
